

Let's Practice Math!

In math, we have been working on reading(identifying), writing and representing numbers up to 20.

Here are some fun ways to practice this at home!

Use small pieces of paper to write numbers.

Have your child pick a number card and then use objects around your house to show that number. We practice making a group of ten first and then showing how many more. (see examples below).

Rice

beads

cereal

To change it up a bit, make a pile of objects and have your student count to tell you how many. You can also have them write the number they counted (see pictures below)

Pasta

blocks

cars

Want to make it more of a challenge?

Simply make number cards with higher numbers or larger groups of objects!

Crackers

Happy Counting!!
